How to choose the right suite options for you

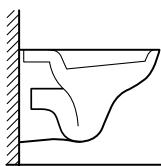

Close Coupled WC

A close coupled WC has the cistern resting directly on top of the pan towards the rear.

Back to Wall WC

A back to wall WC has the concealed cistern hidden behind a wall or fitted furniture.

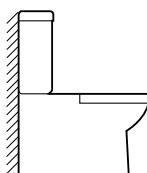

Wall Hung WC

The pan is held off the ground by a hidden supporting frame and, as with a back to wall WC, the cistern is hidden.

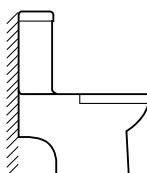

Rimless WC

Rimless WCs are easier to clean as they flush without needing a rim.

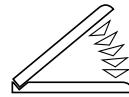

Fully Shrouded

The waste pipe and water inlet are fully shrouded within the ceramic so the toilet sits flush against the wall.

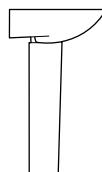

Open Back

Open back toilets have access at the back for your pipework, perfect if you are planning to box in the pipes from left or right.

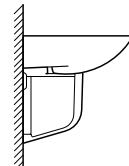

Soft Close Seat

The soft close function ensures that the seat and lid close slowly without banging against the pan, reducing noise and risk of damage.

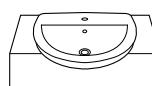

Full Pedestal

The most popular choice, a full pedestal hides all the pipework whilst supporting the basin.

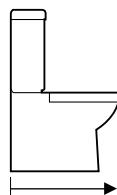

Semi Pedestal

Increasingly popular, a semi pedestal sits under the basin and hangs from the wall, freeing up floor space below it.

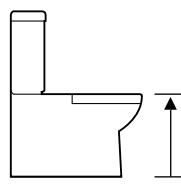

Semi Recessed Basin

Designed to be mounted into a work surface or furniture, the front of the basin protrudes forward, whilst the rear part is recessed.

Short Projection

Reduced depth pans don't project out into the room as far as a standard toilet, making them perfect for smaller spaces.

Comfort Height

Set at a 450mm height or more, comfort height pans provide added comfort, especially for taller people or the elderly.

Complementary Ceramics

Use our complementary ceramics with our furniture ranges.

CRANNACH

Square design with a soft finish

SUPERCAST® BATHS

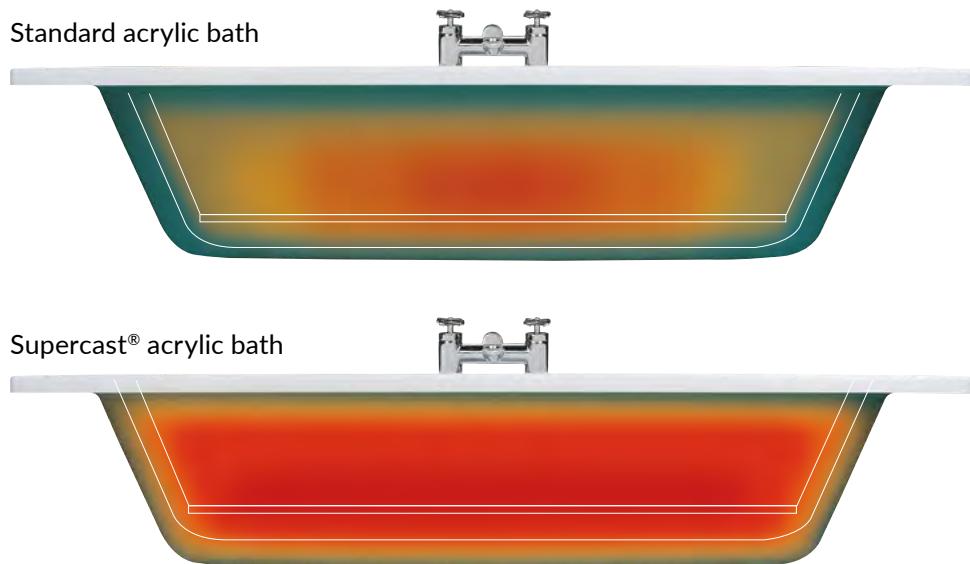

What is Supercast®? Strength and beauty combined

Supercast® is a substantial reinforcement process for an acrylic bath.

This reinforcement process results in each bath being incredibly strong and hard-wearing. This gives you the reminiscent assurance of an old cast iron bath with the natural warmth and quality acrylic has.

Acrylic's unique properties make it ideal for manufacturing baths. Acrylic allows itself to be moulded into many shapes giving many possibilities for varied designs, an attribute that enables baths to be manufactured with design and function working in harmony. The natural gloss is cast all the way through the acrylic resulting in a product that is smooth and ever so easy to clean.

The intensive reinforcement processes and final (grey) 'flow coat' jacket to the entire underside of the bath adds strength and insulating properties. This keeps your bath water hotter for longer!

The Slate shower trays are just 30mm in height, complete with an integrated hidden waste design.

Slate Grey Shower Trays

Luxury slate effect cast stone trays at just 25mm high offer the ultimate modern look.

Linear Shower Trays

Unique to the Linear range is smart water capture technology where liquid is drawn from the surface and delivered at the correct velocity to a capture chamber beneath the waste cover. This ensures that the vortex waste unit is fed at the optimum rate allowing it to function at up to an incredible 30 litres per minute, keeping excess water and soap deposits to an absolute minimum. The waste unit has no moving parts and is entirely self-cleaning, making this technology extremely reliable and reducing the possibility of blockages.

Anti-slip Ultraslim Trays

The 25mm high, 100% natural stone resin trays offer an ultra stylish minimal wetroom look. The Patent protected unique surface is built into the tray and is easy to clean which makes your tray look ultra bright for longer.

Matt Black Low profile Trays

At 40mm high, finished in a Matt Black Acrylic with a stone resin back, these trays can be installed flat to the floor or raised on legs with the matching Matt Black Riser Kits. Included with the tray is a fully black 90mm fast flow waste which allows up to 32 litres of water to be carried away every minute.

Designer Ultraslim Trays

The 25mm high, 100% natural stone gel coat finish tray with a flush fitting waste cover offers an ultra stylish minimal wetroom look.

Low Profile Trays

With an incredibly discreet profile of just 45mm, the Slimline Tray offers the contemporary design of a wetroom styling. Whether it is installed flat to the floor or raised on legs, it's sure to impress. The 90mm fast flow waste allows up to 32 litres of water to be carried away every minute.

SHOWERS

Choose a mixer shower that connects to the hot and cold water supplies and then mixes the water inside the shower to your selected temperature.

Mixer showers normally deliver a higher flow rate than electric showers and are often thermostatic to protect against scalding. Ideal for homes with readily available hot water
You can also add a pump if required to boost the flow from a gravity fed system.

Fibo

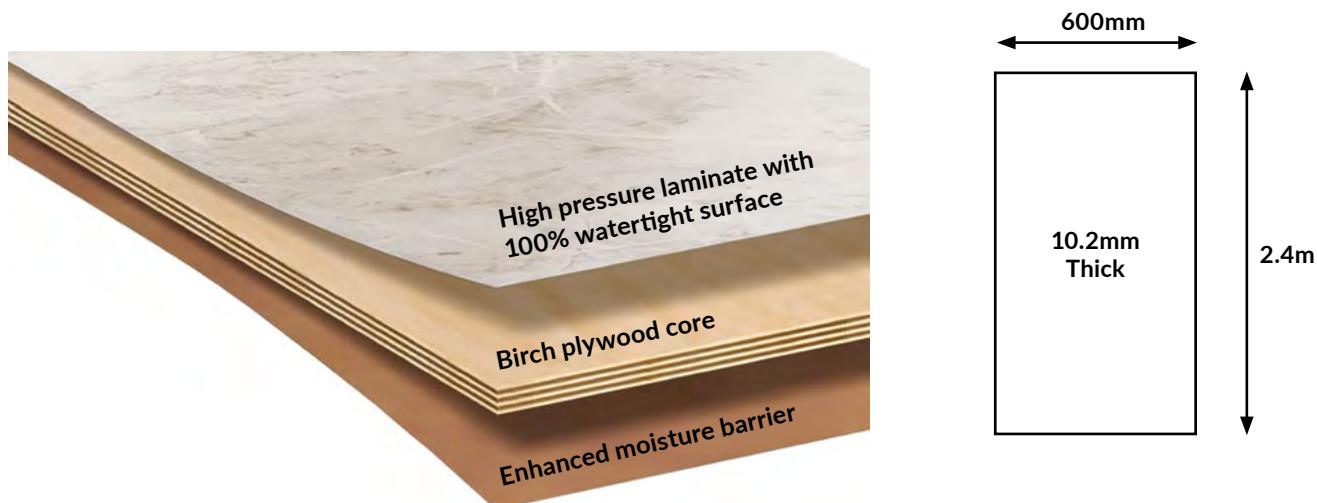

FIBO WALL PANELS

Designed & manufactured in Norway, Fibo wall panels give you 100 percent waterproof walls with exceptional durability.

Made with a 7 layer Birch core, panels simply click together with Fibo's unique Aqualock system which provides virtually invisible joints. With the membrane in the panel front, you never have to worry about hidden damage on the back wall.

Panels can be installed up to five times faster than tiles too, which makes them a great option for fitters.

The panels are available with a range of profiles and accessories to make installation and maintenance easy. With fantastic antibacterial as well as environmental credentials, plus a 25 year warranty, the only question is which style of panel will you choose?

- 10.2mm thick wall panels available in a wide range of tile effect styles to suit any bathroom
- Choose from Urban, Scandinavian, Contemporary or Marble collections
- Range of profile trims and accessories available
- Panels are easily cut to size and can be screwed or glued directly onto solid or stud walls meaning no need for backing boards
- Use the QR code above to visit Fibo's and find out more about the benefits of waterproof wall panels

HEATING FEATURES

CH Central Heating

The benefit of this type of installation is that it is economical to run when the central heating is on. Suitable for use with indirect central heating systems (your plumber/installer will be able to advise the type of system you have). The radiator is fitted to your central heating system and works alongside your existing radiators.

E Electric

The benefit of this type of installation is that the radiator can be installed almost anywhere and does not require any pipework. It has the added versatility of being able to be turned on and off whenever required, regardless of whether or not the rest of your central heating is on. An electrical element kit with a fused spur is required and wired to your electricity supply. The electrical element is screwed directly into the radiator and heats the water.

DF Dual Fuel

The best of both worlds! This type of installation is plumbed with indirect central heating systems and or your electrical supply.

This guarantees the low cost of a central heating system during the winter whilst ensuring the versatility of being switched on and off independently during the summer months. Central heating, electric or both - the choice is yours!

SHOWER WATER SYSTEMS

There are a few different types of water systems in homes in the UK. We can usually make some assumptions about the sort of water pressure each will give.

Gravity Fed System

This is usually a tank in the loft space or inside an airing cupboard. A basic guide to establish how much pressure it will deliver is how high the tank is above the tap or shower. If the tank is 2 metres above the level of the tap or shower, the water pressure will be 0.2 bar. If it is 5 metres, the water pressure will be 0.5 bar. Generally this type of system is low pressure however you can increase the pressure by installing a pump. It is recommended to seek advice from a qualified engineer or manufacturer before choosing your pump as these vary in performance.

MIRRORS

Combination Boilers

These are high pressure systems and are usually set to operate between 0.8 to 1.5 bar. Minimum and maximum pressure can be checked with the manufacturer however most boilers have a gauge to show what pressure it is operating at. Combination boilers have an integrated pump so if the water pressure is too low for your required application, adding another pump can damage the boiler.

Sealed/Unvented Systems

These are modern systems. If you have a hot water tank, but you don't have a cold water tank (cistern) in your loft or garage, this is an unvented high pressure system. They are quite uncommon as they are more expensive however they can usually deliver around 3.0 bar of water pressure.

Zone 1

Electrical fittings in this zone require a separate extra low voltage and a minimum rating of IP65 (splash-proof).

Zone 2

Electrical fittings in this zone require a minimum rating of IP44 (splash-proof).

Outside Zones

Electrical fittings in this zone require no IP rating (unless cleaned by water jets).
